Picture & Signature Verification

Know customers, not just their accounts

FlexVerify is designed to help build more meaningful relationships with your customers. Using advanced indexing techniques, important customer information is available without requesting an account number. View special instructions, create non-customer records, and position your institution apart from big bank competition.

Better service from improved productivity

With expertise in both hardware and network architecture, FlexVerify can be implemented by Atris to meet your institution's needs. Account records hold an unlimited number of pictures and signatures. Customer images are added to new accounts without data input, streamlining your management of FlexVerify. And updated account information is automatically received by branches without batch or manual file conversion tools.

flexverify™

Remarkable Simplicity
## Proven Reliability
Robust Functionality

Prevent fraud, improve customer service, and reduce losses with FlexVerify from Atris Technology. Designed specifically to record a bank customer's picture and signature for future account verification, the FlexVerify solution automates both image storage and retrieval by bank employees. Whether as a standalone solution or in conjunction with teller automation, FlexVerify will have a dramatic impact on your level of customer service and employee efficiency.

With unmatched expertise in wide area network architecture, Atris Technology's products provide seamless integration within any existing network configuration. FlexVerify is fully expandable and can be customized to meet your institution's specific needs, giving you the flexibility to build your relationships.

Add images easily with industry standard hardware

Each unique identification record can be linked to multiple accounts

© Atris Technology, Inc.
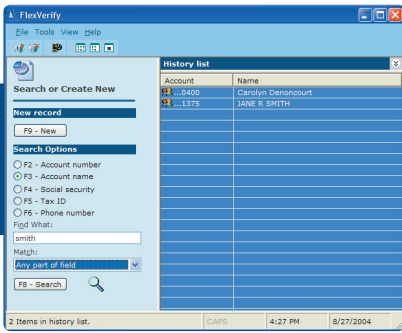

Perform inquiries using name, account number, social security, even telephone number searches.

Add, edit or delete customer images against multiple accounts - even sort images in order of bank preference.
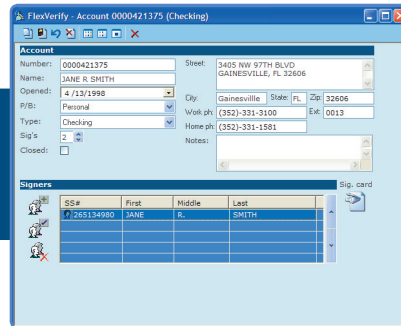

Identify unusual transaction activity and stop fraud before it starts
